

Sculpting Memories in Stone and Water

[Interactive Stone Sculptures and Water Features by Waterfountains.com, Inc.](http://Waterfountains.com)

If you have a specific water feature project in mind for the near future, please call for a special presentation so that we may discuss your plans with you. *Design services and budgetary quotations are available to you at no cost.* You may reach me at 909-595-1222, reply by email, or I shall be pleased to call you at your convenience.

If I may explain to you what is available, how our fountain sculptures function, and some information on our pricing, you will be better prepared to determine the feasibility of one of our spherical stone sculptures for your project. Spheres are available from us in diameter sizes of 12 inches to nearly ten feet (85,000 lbs). Many materials are available in both the standard and premium categories. *Sphere etching* is also available for continents, logos, or any other symbols that you can design. We have two important components, the sphere and the water bearing base unit. The base unit must have a diameter of at least the diameter of the sphere, but can be much larger if so designed. The shape of the base can be in any design, but is quoted on our price guideline sheet as polished and square. The height of the base can also be determined by your design. Please review our [SHOWROOM and PROJECTS](#) on our website for a few examples. We provide no cost design services to work with you or your client in getting the general design of the base unit and sphere, and the technical specifications for the final fabrication and installation.

Our price guidelines are merely that, guidelines, and we always give a specific *Budgetary Quotation* on your fountain/sculpture, and in many cases this may be lower than the price guidelines. The Budgetary Quotation includes stone components, all necessary equipment, delivery to the job site, technical onsite supervision, and all of our design services. Once the design and materials are agreed upon, we require a 50% deposit with the remainder due after installation and proper functioning. We provide warranties on all stone components and equipment.

Prior to delivery, we work directly with your electrical and plumbing contractors on requirements and designs, and ship in advance the equipment for installation so that the site is prepared prior to our arrival with the stone components. Normal installation on the date of arrival is 4 to 6 hours maximum.

We also have available services with Laser Engraving of panels that can be included on the base unit with hi-resolution pictures and/or text of your choice permanently engraved. Please see examples on our website [LASER ENGRAVING](#). Our [ICONS OF PEACE](#), a new design series for the promotion of global solidarity, are examples of this process.

Additional options available include underwater lighting, water heaters, and [LAMINAR Water Arcs](#), which have become very popular lately either crossing over the sphere or pointing at the sphere. We are pleased to discuss these options with you at anytime.

Thank you for your time, and we hope that we are able to discuss your project with you, as our fountain sculptures are the [MOST REMEMBERED WATER FEATURES in the world.](#)

Sincerely,
Gary E. Jackson
President
